

THE SIGHTS & SOUNDS
OF EDUCATION

Diggiditto™ Smart Document Camera

Model DC596

Providing a complete audio video learning solution by linking with a computer, the Diggiditto can engage the entire class. It includes all of the hardware features you'd expect from a leading document camera, but its proprietary software also enables the Diggiditto to be used as a content development tool by recording movies (wmv files), recognizing saved images, and linking sounds to a file for playback of teacher or student created presentations and tutorials.

1. Detachable camera with internal microphone for audio video recording
2. USB connection for computer compatibility and can be then projected onto a screen, TV, electronic whiteboard or PDP screen in real time
3. Easily adjustable mounting stand with a small footprint for desktop uses

Other Capabilities

- Split screen viewing enables simultaneous viewing of saved & live images (helpful for demonstrating "before and after" results of science experiments for example)
- Built-in annotation software enables you to make notes over what's shown on the desktop or a stored image and can then save as one image
- Image recognition capability – an image or object can be coupled with a programmed response (ie sound). For beginning readers for instance, if you place a picture or object under the lens, Diggiditto will respond with music, reading aloud, etc.
- "Make and Teach" feature enables movies and sounds to be linked and automatically played when the file opens for teacher generated multimedia tutorials.
- Easy video, image capturing and editing
- 2 megapixel resolution on the camera

"Project Intercept"

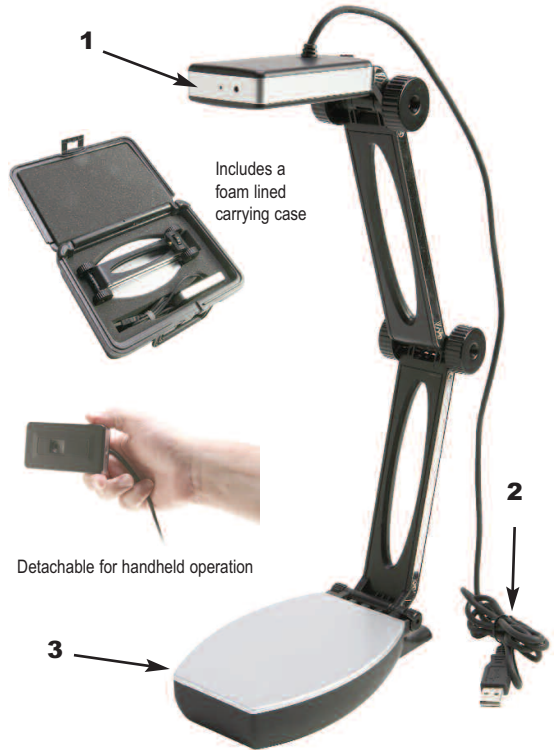

Please contact us immediately if you experience any difficulties with your Diggiditto Document Camera. Our "Project Intercept" customer service program will quickly repair or replace items under warranty. Simply contact us via phone or email warranty@califone.com
